1 Overview

There are infinite ways to develop and maintain an inventory system. However, this inventory is the unique and **temporary** solution for the ICS Tuna Lab. This inventory system is designed to minimize resources when an engineer register bulky items to the existent JIRA ICS HW&I group inventory task. Therefore, it does **NOT** provide any fancy and beautiful ways to interact with users, **BUT** does provide the minimal tool to monitor and track any equipment in ICS, ESS, and any IK partner. And the system only provide the following features :

- Do stock an item to JIRA, and do Add-and-Print its barcodes.
- Do stock an item to JIRA, and do Add-and-Print its barcodes.
- Delete an item from JIRA.
- Print the existent (created) label (in case, the printer doesn't work properly)

1.1 Inventory Workflow

1.1.1 How to stock an item at the first time to JIRA

The mandatory steps are defined the following procedures :

Scan the Serial Number on the equipment with the Xenon 190x barcode scanner.

Figure 2 User Interface Screen Example after the serial number scan.

Scan one of 3.3 Model Codes in the manual with the Xenon 190x scanner.

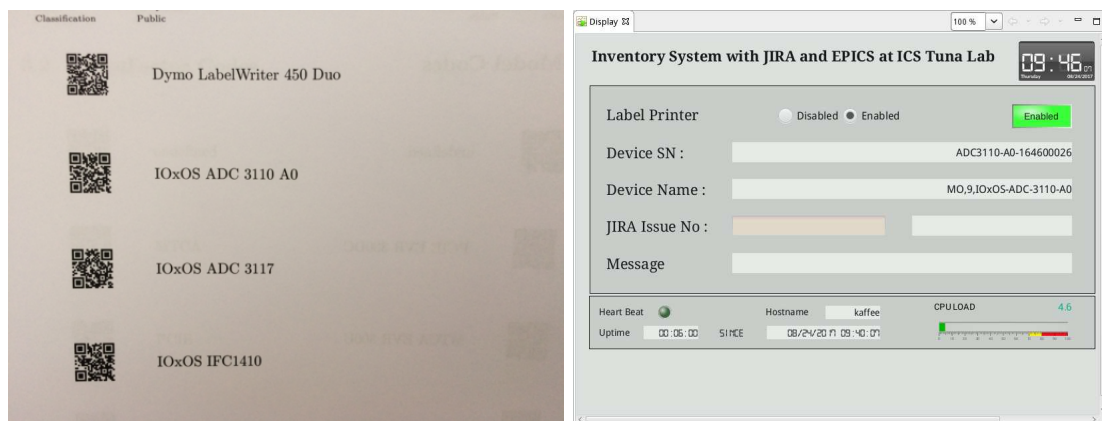

Figure 3 User Interface Screen Example after the Model Name scan.

Classification	Public

Both case in below, the created labels are attached in the JIRA issue.

1. Scan Enable Label Printing after JIRA action if one wants to print labels (Default)
2. Scan Disable Label Printing after JIRA action if one wants not print labels

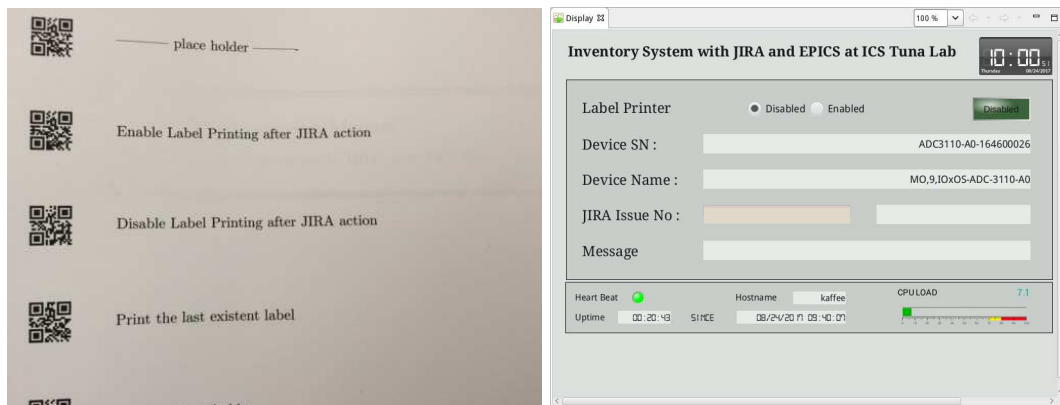

Figure 4 User Interface Screen Example for Enable and Disable Labels

Scan Create an JIRA issue in the manual

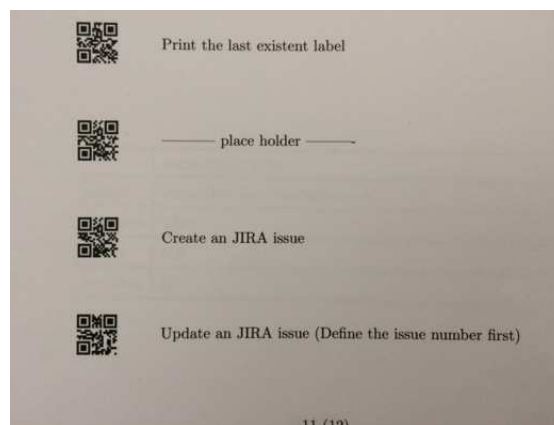

Figure 5 User Interface Screen Example after the Create an JIRA scan.

Classification	Public

Attach two barcodes in the reserved box, an equipment, or both.

Figure 6 Equipment with labels. The small one should be trimmed properly.

1.1.2 How to add and print barcodes for an Item which has registered in JIRA

1. Define the TAG number which one wants to delete it via CS-Studio User Interface or caput
caput ICSLAB:IssueNumber TAG-XXX
2. Scan the Serial Number on the equipment with the Xenon 190x barcode scanner.
3. Scan Model Name in the manual with the Xenon 190x scanner.
4. Both case in below, the updated labels are attached in the JIRA issue.
 - a) Scan Enable Label Printing after JIRA action if one wants to print the updated label (Default)
 - b) Scan Disable Label Printing after JIRA action if one wants not print the updated label
5. Scan Update an JIRA issue in the engineering manual

1.1.3 How to delete the existent Item

1. Define the TAG number which one wants to delete it via CS-Studio User Interface or caput
caput ICSLAB:IssueNumber TAG-XXX
2. Scan Delete an JIRA issue Barcode in the manual with the Xenon 190x barcode scanner.

1.1.4 Print the existent labels

In case, there is the printer issue, for example, print only one of two labels, not responding, and so on.

1. Please check the printer status at <http://localhost:631/> and resolve it. Note that one should know the basic CUPS configuration.
2. Print the existent label by scanning the barcode (Print the last existent label) in the manual. Note that this action will print only the recent created labels.

1.2 Components

1.2.1 Hardware

- Honeywell Xenon 1900g (Wire) or 1902g (Wireless) Barcode scanner
- DYMO LabelWriter 450 Duo

1.2.2 Software

- Linux OS (tested with Debian 8)
- EPICS IOC <https://github.com/jeonghanlee/hw-xenon1900>
- JIRA <https://jira.esss.lu.se/projects/TAG/summary>
- DYMO LabelWriter 450 Duo CUP Driver
<http://www.dymo.com/en-US/dymo-label-sdk-and-cups-drivers-for-linux-dymo-label-sdk-cups-linux-p--1>

Delete an JIRA issue (Define the issue number first)

5 Summary

The system has the limited functionality for the usage of ICS Tuna Lab, since ICS would like to save at least 5 mins while stocking an equipment into the existent JIRA project. The system fulfilled the early and limited requirement, i.e., saving 5 mins per an equipment. Therefore, this development was ended. The system is now running in the ICS Lab.

However, it may be the good starting point if one wants to implement the system with any relational database, which is more flexible than the restricted JIRA project, which cannot be modified with the current permission.

If one has any questions and comments on this system, please contact the developer through han.lee@esss.se.
